

04-151

Our WISP is in a very rural area. We service exclusively to out of town farmers, businesses and residence in MN. Even in this area with the closest city of 14,000 over 10 miles away from one of our tower sites we see congestion in the ISM bands. This has effected our ability to service our customers. Any additional spectrum in this band will allow us to continue to grow and serve an ever growing population as effectively as possible in an unlicensed arena.
